Effect of β -glucan on the oxygen radical production of Head Kidney cells in common carp.

Natalia Ivonne Vera-Jiménez & Michael Engelbrecht Nielsen

Biological Quality Group, DTU Food, National Food Institute, Lyngby, Denmark

Methodology

Aeromonas hydrophila

Results

So if you give a β -glucan bath treatment to the fish, and then challenge them with *Aeromonas hydrophila* you get...

Pictures by Jacob Schmidt, Biological quality group, DTU Food.

Relative RB response by Head Kidney cells of Unwounded Carp

Relative RB response by Head Kidney cells of Wounded Carp

Relative RB response of HK cells to B-glucan

But if you apply β -glucan directly to the HK cells, the response looks like....

What is happening?

- Does β -glucan decrease oxygen radical production during bacterial challenge?
- Are the cells exhausted?
- Is it just a dose matter?
- Does the method of delivery affect the response?
